Organics Mechanics Container Blend Potting Soil: This free-draining mix is great for your summer and winter containers, or for potting up your garden divisions. The Scott Arboretum uses Organics Mechanics Container Blend exclusively for potting and containers because its sustainable peat-free blend guarantees excellent results. Woodies, perennials and herbs love it!

Soil Reef Biochar Gardener's Blend Lifetime Soil Amendment: BioChar is a fine-grained, highly porous charcoal that improves soil structure and boosts fertility. The many pores in BioChar provide a home for microorganisms, beneficial bacteria and mycorrhizal fungi, which bring your soil to life. Great for clay soils. The Gardener's Blend is a 50/50 BioChar and compost blend which provides a lifetime benefit and sequesters carbon in the soil for hundreds of years.
